

## Comcast Careers Website Clone (Front-End)

### Overview:

A responsive front-end clone of the Comcast Careers website, built to replicate the professional design, layout, and user experience of the original portal. This project highlights my skills in HTML, CSS, and JavaScript while showcasing a modern corporate-style website for portfolio and hiring purposes.

### Technologies Used:

HTML5 → Semantic structure

CSS3 (Flexbox & Grid) → Layout and styling

JavaScript (vanilla) → Interactivity and scroll effects

Responsive Design → Optimized for desktop, tablet, and mobile

### Key Features:

Hero Section with Search Bar → Includes job keyword, location, and distance filters with styled inputs and buttons

Sticky Sidebar Navigation → Quick access to sections like Job Opportunities, Life at Comcast, and Benefits

Full-Page Scroll Sections → Each section designed to fill the screen for a clean, immersive experience

Pixel-Perfect UI → Colors, typography, and layout closely match the official Comcast Careers site

### Outcome:

Strengthened skills in front-end development and responsive design

Gained experience in cloning professional websites with attention to detail

Delivered a portfolio-ready project tailored for showcasing at Comcast hiring
